USA & Canada SOURCES for Microgreens & Sprouts SEEDS & NEEDS

by Mark Mathew Braunstein

March 2019 edition

This is the expanded and updated and clickable
SOURCES chapter of **SPROUT GARDEN**
& RESOURCES link of **MICROGREEN GARDEN**

ALL LINKS LIVE as of March 2019!
Updated 2019 & posted at:

www.MarkBraunstein.Org/sprout-garden

&

www.MicroGreenGarden.com/free-pdfs

While even the finest books on sprouting go out-of-print, still more transitory are the companies that specialize in sprout and microgreen seeds and supplies. For every printing of *Sprout Garden*, the *Sources* chapter was revised and updated, else the listings quickly go stale and obsolete. You need not to invest in the latest editions just for the *Sources* chapter, because here it is.

Upon publication of *Microgreen Garden*, I did not list in that book any *Sources* chapter, but instead refer readers directly to my website for this PDF.

And same here as in previous editions of this PDF, companies that stock other books on growing sprouts or microgreens but not *Sprout Garden* or *Microgreen Garden* are still listed here. ***I list vendors solely on their merits.***

Nor do I accept any “affiliate marketing” from any of the websites listed here. If you click on links here and purchase from these vendors, I receive no compensation whatsoever. Again, ***I list vendors solely on their merits.***

May your future be filled with sprouts and bountiful with microgreens!

Microgreens & Sprouts SEEDS & NEEDS from Garden Seed Suppliers

Mail order sources for **gardening and farming** seeds number in the hundreds, but only a handful offer **untreated** seeds in bulk quantities. For purposes of sprouts and **microgreens**, “untreated” (or “organically grown,” which by definition means also “untreated”) and “bulk” are the crucial criteria.

Unless their catalog states otherwise, gardening seeds are routinely treated with fungicides and sometimes insecticides. That poses little health risk to humans if the seed starts small, if the plant grows big, and if the growing season stretches long. For sprouts and **microgreens**, however, beware! (And even from untreated seeds, the sprouts of tomatoes, eggplant, and peppers are toxic.)

Cost is always a consideration. Small packets suffice for gardeners tending a single row all season long in their backyards, but for sprout folks that’s enough for only a single container for one cycle on a windowsill. So seek bulk quantities by the kilo or pound. That levels the planting field to few sources. Though not always organically grown, their seeds will expand your repertory into a preponderance of sprouts and **microgreens**.

Indeed, please pardon my professing my personal preferences, but I feel more confident purchasing seeds for **microgreens** from garden seeds sources rather than other sources, because despite the higher costs for documentation I value and appreciate printed statements of:

- 1) CULTIVAR name
- 2) DATE of harvest, not diversionary if not intentionally misleading packaging dates
- 3) GERMINATION rate
- 4) ORGANIC certification
- 5) BOTANICAL name
- 6) COUNTRY of ORIGIN, if imported

I have not ordered from all the garden seed suppliers listed below. But if I did order from companies that did not list harvest dates or cultivar names in their catalogs or on their seed packets, I banished them from this list. Worse, one of them designated its dozen or more cultivars of single species as all of them being ideal for microgreens, when in fact only a few of their cultivars were, about which I speak from direct experience. So that fraudulent company too is banished from this list.

Johnny's Selected Seeds

955 Benton Av, Winslow, ME 04901

(877) 564-6697, (207) 861-3902

www.johnnyseeds.com

*Seeds for sprouts and for **microgreens**, many organic, all in bulk quantities. In its other vegetable categories, unless noted with a "T" (for "Treated") in the order number, rest assured that all its seeds are untreated, but still you should specify that you want only untreated seeds. (Check coupon websites for free shipping offers)*

Seeds (65 or more total !!!) for **microgreens** : <http://www.johnnyseeds.com/vegetables/micro-greens/>

Seeds for sprouts at: www.johnnyseeds.com/c-245-sprouts.aspx

Seeds for shoots at: www.johnnyseeds.com/c-281-shoots.aspx

True Leaf Market

Salt Lake City, UT 84115

(866) 948-4727

www.growingmicrogreens.com

*A source for a wide variety of seeds sprouts and for **microgreens** from 1 oz quantities to 25 pounds (!), but few organic. While the seeds do NOT always list harvest date or germination rate as do all garden seed suppliers, my experience with their seeds has been satisfactory. The seeds are packaged in airtight plastic sleeves that are better than those from most garden seed suppliers, so you can refrigerate the seeds without the need to move them into glass jars.*

Also kits, soil and hydroponic growing supplies, LED grow lights, and books, including my own

*Seeds for **microgreens** at*

<https://www.trueleafmarket.com/collections/microgreens-kits-and-supplies>

High Mowing Organic Seeds

76 Quarry Rd, Wolcott, VT 05680

(802) 472-6174

www.highmowingseeds.com

*ALL ORGANIC (so all untreated) seeds, a variety nearly as great as Johnny's (above), but here (repeat!) ALL ORGANIC. Categories include sprouts, shoots, **microgreens** and "specialty" greens, plus the usual veggies, all in bulk quantities. Request or download its catalog.*

*Seeds for **microgreens** at: <https://www.highmowingseeds.com/vegetables/greens-micro.html>*

Seeds for sprouts & shoots at: <https://www.highmowingseeds.com/vegetables/greens-sprouts-shoots.html>

West Coast Seeds

4930A Elliott St, Ladner, BC, CANADA, V4K 2Y1

(888) 804-8820

<https://www.westcoastseeds.com>

*An excellent resource for our Canadian friends. seeds for sprouts & **microgreens**. Also sprouters, automatic sprouters, seed starter supplies, including seedling trays and heating mats.*

Website has a very flashy interface, but is difficult to navigate, and try as I may, I am unable to provide direct links to its sprouting seeds and to its microgreen seeds, so you are on your own.

*Books on saving seeds and sprouting seeds, including my book **SPROUT GARDEN** at:*

<https://www.westcoastseeds.com/collections/books/products/sprout-garden>

Grow Organic (Peaceful Valley Farm Supply)

POB 2209, Grass Valley, CA 95945
(888) 784-1722

www.groworganic.com

Mostly organic seeds, sprouting seeds (from Mumm's of Canada), bulk seeds, and gardening supplies. The photos are good, while the beautiful illustrations are outstanding, plus they are zoom-able.

Bulk organic seeds at: <http://www.groworganic.com/seeds/bulk-seeds/bulk-organic-seeds.html>

Mumm's Seeds for sprouts: www.groworganic.com/seeds/sprouting-seeds/organic-sprouting-seeds.html

Cold frames and grow lights at: <http://www.groworganic.com/growing-supplies.html>

Todd's Seeds

46495 Humboldt Dr
Novi, MI 48377
(888) 246-5233

www.toddsseeds.com

*A lower price source for a wide variety of bulk seeds in quantities usually up to 10 pounds for both sprouts and **microgreens**, some organic. On the very big plus side for sprouts, Todd's lists germination rates and dates of testing for all its sprouting seeds, same as do nearly all garden seed companies but as no sprout seed companies do. But on the minus side, its categories for both sprouts and microgreens include seeds that are inappropriate for growing sprouts (for instance, parsley and basil) or microgreens (for instance, grey stripe sunflower).*

Also offers the Easy Sprout sprouter and planting trays.

Seeds for sprouts at: <http://seeds.toddsseeds.com/wholesalesproutingseeds>

Seeds for **microgreens** at: <http://seeds.toddsseeds.com/microgreens>

Hart's Seeds

304 Main St
Wethersfield, CT 06109
(800) 326-HART

www.hartseed.com

All seeds untreated and non-GMO, with a separate catalog listing for bulk. Seeds most suitable for microgreens are not specified, but they stock all the standard cultivars so you can figure it out yourself. Still a family-owned business, Hart does not make online ordering easy, so for sample small packets it is easier to order thru their 3rd party vendor Online Greenhouse at:

<http://www.theonlinegreenhouse.com/hart-seeds.html>

Downloadable "printed" catalog for bulk at: <http://hartseed.com/our-products/bulk-seeds/>

ALSO worth noting:

Epic Gardening – excellent source of free Growing Guides for several specific species of microgreens at <http://www.epicgardening.com/microgreens/>

Harris Seeds – 6 sprout seeds, supplies, & untreated seeds for microgreens www.harrisseed.com

Mountain Rose Herbs – 10 sprout seeds:

www.mountainroseherbs.com/sprouting/sprouting_seeds.html

Starwest Botanicals – 13 sprout seeds: www.starwest-botanicals.com/category/organic-sprouting-seeds

Ornamental Edibles – download the catalog: www.ornamentaledibles.com

Vermont Bean Seed Company – tons of beans! www.vermontbean.com

Fedco Co-op Seeds – download the interesting catalog, but be advised that most orders must be placed way in advance of the spring-growing season: www.fedcoseeds.com

Wheatgrass Greenhouse – www.wheatgrassgreenhouse.com
3 microgreen seeds: https://www.shop.shopwheatgrass.com/Organic-Seeds_c10.htm
also good source for free instructions on growing sunflower greens and wheatgrass

ALSO for our British and European friends

CN Seeds – 22 microgreen seeds & 12 sprout seeds, in England: <http://www.cnseeds.co.uk>

Rem Seeds (Euroseed) – download its catalog, sprouts on page 30, www.remseeds.com
microgreens at <http://www.remseeds.com/en/c9-baby-leaf/>

Sprout & Microgreen SEEDS & NEEDS from SPROUT SEEDS SUPPLIERS

Truth be told, I purchase 95 percent of my sprouting seeds (and grains and beans) from the bulk bins of my two local food coops. I first buy a small sample, go home and test its germination rate. If it meets my high standards, I quickly return to the store and buy a larger quantity. And my high standards are met 95 percent of the times.

Sprout seed companies all are family businesses owned by highly ethical people who do great good in the world. Like any mom and pop, they sincerely believe that their children are the smartest kids on the block ... and that their sprouting seeds are the best seeds available with the highest germination rates possible. I regret to have to tell you, dear reader, that like all proud parents they are filled with puffery. They all purchase their own stock from the same few sources, and compared to what I purchase from the bulk bins of my two local food coops their seeds' germination rates are no better. And sometimes are worse. I once mail ordered obscure varieties I could not find in stores that were so obscure that no one else ever purchased them from the mail-order source, and so their stock was so old that the germination rates were low. One was far less than 50 percent, and another was zero percent. And remember, this was a sprout seed company.

The one "sprout" seed (really a microgreen seed) seldom found in stores is unhulled black oil sunflower. And generally sprout seed companies stock a

variety of black oil sunflower that is better than those stocked by garden seed companies. Better because of their higher germination rate and because they more thoroughly shuck off their shells. So I do mail order my black oil sunflower seeds for growing sunflower greens.

Most sprout seed companies test for the three major bacteria that can cause food-borne illness, so their seeds do offer an extra level of safety than found in grains and beans intended to be cooked for human consumption. While alfalfa has historically been the source of most food-borne illness in commercially grown sprouts, I loathe alfalfa sprouts and never grow alfalfa sprouts, so I personally am not concerned about food-borne illnesses from sprouts.

If you, however, are concerned about food-borne illness, and for the convenience of mail-order, then please do mail order your seeds from these fine companies:

For nutritional analysis about sprouts, consult the USDA's website (search by keyword SPROUTS): <http://ndb.nal.usda.gov/ndb/foods/list>

Sproutpeople

All commerce is conducted through to its website.

www.sproutpeople.org

The most comprehensive book on sprouting is not a book. It is a website, sproutpeople.org. Edifying and extensive (at times TOO extensive!), its website also offers videos and several hundreds (100's!) of web pages of information on all aspects of sprouting beyond simply HOW TO, free to everyone.

Plus they sell everything you might need for sprouting except for the kitchen sink and except for books, so the reason I list Sproutpeople here first is not because they sell my own books.

*Among their oodles & oodles of all OG seeds, seeds for **microgreens** are indexed at:*

<http://sproutpeople.org/seeds/microgreens.html>

Mumm's Sprouting Seeds

P.O. Box 80, Parkside, SK

Canada S0J 2A0 [these are number zeros, not letter O's]

(800) 263-4490

(306) 747-2935

www.sprouting.com

A primary source of info on the web about HOW TO sprout at: http://sprouting.com/how_to_sprout.html

Plus, of course, an extensive all OG seed list.

*Also books (including my own **Sprout Garden** and **Microgreen Garden**), automatic sprouters, sprouting bags, jars and containers.*

A supplier to other commercial sprouting companies and garden seed companies, Mumm's welcomes orders from home sprouting folks.

*USA customers: be sure first to click **USA** on the top menu bar, otherwise prices may be for Canada and quantities may be metric.*

*Seeds for sprouts and **microgreens** at:*

<http://sprouting.com/category/226/Sprouting-Seeds.html>

Sprout Garden at:

<http://sprouting.com/product/405/Sprout-Garden%3A-Indoor-Grower%27s-Guide-To-Gourmet-Sprouts.html>

Microgreen Garden at:

<http://sprouting.com/product/652/Microgreen-Garden.html>

Sprout House

138 Elm St, Saugerties, NY 12477
(800) SPROUTS, (845) 246-6875

www.SproutHouse.com

All OG Seeds, wheatgrass juicers, automatic sprouters, sprouting bags and containers, jar lids and screens, trays, non-soil STG pads and cellulose pads for growing microgreens, the works! Terracotta and ceramic sprouting trays (my favorites) previously were listed, but as of 2019 no longer. Perhaps again in the future?

Many seeds suitable for microgreens are available but not indexed.

Seeds at: <http://sprouthouse.com/organic-sprouting-seeds/>

True Leaf Market (formerly Handy Pantry)

Salt Lake City, UT 84115
(866) 948-4727, (800) 735-0630

<https://www.trueleafmarket.com/collections/handy-pantry-new-home>

(An affiliate company of Growing Microgreens and Mountain Valley Seeds.) Seeds, automatic sprouters, sprouting jars, jar lids and screens, and containers, including one called Sprout Garden (with no connection to my book whose title preceded the container by ten years). The Sprout Garden sprouting device is based upon the same ventilation principles of Sproutamo's Easy Sprout, but unlike Easy Sprout is a tray sprouter, so ideal for greening leafy sprouts such as clover, radish, mustard, and broccoli. I highly recommend its Sprout Garden sprouter as an excellent tray sprouter for greening radish sprouts and mustard sprouts. (I prefer to grow broccoli on soil as a microgreen, and do not like and therefore never grow clover sprouts.) Be assured I have no affiliation whatsoever to this company, which only in 2013 began carrying my book.

Seeds suitable for microgreens are also available but not indexed separately:

My book **Sprout Garden** at: <https://www.trueleafmarket.com/sprout-garden-growers-guide-book-mark-braunstein>

My book **Microgreen Garden** at: <https://www.trueleafmarket.com/book-microgreen-garden>

Sproutman / Sprout Brothers

All commerce is conducted through to its website.

(800) SPROUT1

www.SproutMan.com

All OG Seeds, wheatgrass juicers, automatic sprouters, sprouting bags and containers, books, the works! Just ignore all the annoying hyperbole, and disregard the insulting-to-one's-intelligence sale prices, because if **everything** is **always** on sale then **nothing** is **ever** on sale. Maybe someday this otherwise reputable company will clean up its questionable marketing hype.

International Specialty Supply (ISS)

820 E. 20th St, Cookeville, TN 38501
(931) 526-1106, ext.104 for retail orders

www.sproutnet.com

The major supplier of equipment, supplies, and seeds to commercial sprouting companies, including internationally, as its name attests. **Retail sales of seeds at 25 pound minimum.** Many seeds suitable for microgreens are available but not indexed separately.

Its website indexes scientific research into the potential of various sprouts to treatment diseases:

<https://sproutnet.com/research-on-the-role-of-sprouts/>

Research about sprouts: <https://sproutnet.com/research-on-the-role-of-sprouts/>

Got Sprouts

8420 Resource Road, Riviera Beach, FL 33404

(561) 689-9464

www.gotsprouts.com

*The newest company on this listing, it has grown very quickly into a major supplier. All-organic seeds, 19 in all, juicers, wheatgrass juicers, dehydrators, Easy Sprout sprouting containers, trays, the works! Also many seeds and trays suitable for **microgreens**.*

Sprout & **Microgreen** SEEDS & NEEDS from **Natural Foods Distributors**

Most seeds from your local natural foods store are intended for cooking and eating, not necessarily soaking and sprouting. Consequently, due to advanced age or poor storage, viability can be inconsistent. Among mail order distributors of **natural and organic foods**, these four are the most attentive to the needs of fastidious sprout folks, in many cases providing sprout worthy foods not stocked by the previous seven sources. Many seeds suitable for **microgreens** are available but not indexed separately. When searching their websites, be sure to click *Beans* (or *Legumes*) and *Grains* in addition to *Seeds*. Some also offer books, sprouting bags, jar lids and screens.

Sprouting Containers & Jar Top Lids

“Traditional” Plastic Sprouting Lids

The wide-mouth traditional canning jar, available locally, is a basic do-it-yourself sprouting container better than many commercial ones. Mason and Ball are the two major USA manufactures of canning jars, but any canning jar will suffice as long as it is wide-mouthed. The jar's lid, however, does improve when made of plastic. Such plastic lids, manufactured by *True Leaf/Handy Pantry* and by *Sproutpeople* (see above) can be ordered from most of the above sources.

“Newfangled” Plastic Sprouting Lids

A new plastic lid, like an attempt as a better mousetrap, was introduced on the marketplace in 2018. A feeble solution in search of a non-existent problem, it purports to prevent water from flowing off the top and onto the outsides of the jar

when you fill the jar with water. If the little that does spill over the sides somehow annoys you, you need only first remove the lid before filling the jar with water. (Duh!) But if that sounds like too much work for you, then this newfangled lid comes to the rescue.

Its one drawback is that the fine-mesh of both lids in the 2-pack is identical, rather than fine, medium, and course, which is how the 3-packs of “traditional” plastic lids are sold. Yet, I use medium-mesh lids 95-percent of the time. Its one virtue is that it costs only slightly more than traditional plastic lids, so if you happen to be in the market for plastic lids, give these a try. But do not purchase these as an upgrade if you are thinking of replacing the plastic lids that you already have been using.

You can view an instructional video (am not kidding!) at :
www.MasonTops.com/sprout and if you want to give them a spin, go to:
<https://www.masontops.com/collections/sprouting-tools-accessories>

Sprouting Bags

Among many commercial sprouting containers, cloth bags, called “sprouting bags,” work well ONLY for beans, as they are too difficult to clean for any seeds smaller. Formerly made of linen (flax) and now from hemp (cannabis), sprouting bags can be ordered from most of the above sources. If you want to go on the cheap, buy cotton bags from paint stores sold for filtering paint.

The Easy Sprout

Despite many commercial sprouting containers already available, new ones continue to be brought to market. Inventors and inventive marketers apparently believe that the perfect sprouter does not yet exist. Still, Sproutamo’s long standing “Easy Sprout” works best for most, not all, types of sprouts. (Handy Pantry/True Leaf Market’s “Sprout Garden” sprouting device merits a very close second place.) Easy Sprout truly is the easiest to use, and that includes easiest to clean, second only to Mason canning jars. Easy Sprout (and the ceramic tray sprouters offered by Sprout House) is this author’s own choice for bountiful big beans. (Be assured that I have no affiliation with Sproutamo, nor does Sproutamo recommend to its customers my book **SPROUT GARDEN**. My recommendation of “Easy Spout” is based solely on its merits.)

The “Easy Sprout” was conceived by an engineer who attests its idea came to him in a dream.

Sproutamo
POB 17, Lake Mills, WI 53551
(920) 648-3853
www.sproutamo.com

“Easy Sprout” is available from the manufacturer with quantity discounts. Its website provides much information and many suggestions. Also available from Mumm’s, Sproutpeople, Sprout House, Got Sprouts, and Amazon.

*The remaining brief listings of references to websites are no less important than the above listings with lengthy annotations. These entries simply are shorter. For further sources of information, search the web with the word sprouting (not sprouts) or the phrase “how to grow **microgreens**”*

PUBLISHERS

The Book Publishing Company / Healthy Living Publications – publisher or distributor of books by Viktoras Kulvinskas, Steve Meyerowitz, Brian Clement, and of this Seeds & Needs directory's author's own books **Sprout Garden** and **Microgreen Garden**

Related EQUIPMENT

10x20 inch plastic nursery flats are flimsy even when reinforced with boards underneath or when stacked one inside another. I wonder why any microgreen grower ever uses them. I never do because they are bigger than can sit flat in my kitchen sink. And at 2 inches deep, they also are deeper than needed.

for an excellent upgrade from 10x20in nursery flats– **Paperpot Co.** offers a very sturdy replacement at only twice the price of cheap, flimsy nursery flats. Unfortunately, they are sold only in packs of 10, and with no comparable tray with no vents on the bottom.

<http://www.paperpot.co/product/nursery-flats/>

for Cafeteria (Fast Food) TRAYS – **Tiger Chef** offers a wide variety with quantity discounts and speedy shipping, of which the most durable (and most expensive, but worth it) are made of fiberglass. A very handy Search feature allows you to limit your search by material (fiberglass, yay!) and by tray length or width, to fit its size to your sink: <http://www.tigerchef.com/search/-fast-food-trays/>

for manual & automatic SPROUTING devices – **Urban Homemaker** offers 8 varieties <https://www.urbanhomemaker.com/productcart/pc/viewCategories.asp?idCategory=569>

for COLD FRAME assembly kits – **Greenhouse Megastore** is the least expensive source, but be aware that cold-frame kits consist of numerous parts that require several hours to assemble. You can save both time and money by assembling your own from old windows frames leaning against an exterior wall of your home.

Sort by lowest price for the small cold-frames:

<http://www.greenhousemegastore.com/category/hobby-greenhouse-kits>
